

Common issues

Mouse uncontrollably spins in games

This usually happens in games and no matter what you change you can't play.

The solution is to tick the "Use relative mouse moves" in the server advanced settings and add a hotkey where you "Lock cursor to screen". You can set it to toggle, so if you want to come out of the remote machine's screen, you can just hit the same hotkey.

The image shows the Barrier application window. The title bar is dark grey with the Barrier logo on the left and window controls on the right. The menu bar contains 'Barrier' and 'Help'. The main content area is divided into two sections. The top section is for 'Server (share this computer's mouse and keyboard):' and is currently selected with a green checkbox. It contains fields for 'IP addresses:' and 'SSL Fingerprint:', both with empty text boxes. Below these is a radio button labeled 'Configure interactively:' which is selected. A green button labeled 'Configure Server...' is highlighted with a red rectangular border. Below the radio button is another radio button labeled 'Use existing configuration:'. Underneath is a 'Configuration file:' label followed by an empty text box and a 'Browse...' button. The bottom section is for 'Client (use another computer's mouse and keyboard):' and is unselected. It contains a 'Screen name:' label followed by an empty text box, and a 'Server IP:' label followed by a long empty text box. At the bottom of this section is an 'Auto config' checkbox. The status bar at the very bottom shows a lock icon and the text 'Barrier is running.' On the right side of the status bar are two buttons: 'Reload' and 'Stop'.

Barrier Help

☒ Server (share this computer's mouse and keyboard):

IP addresses:

SSL Fingerprint:

☒ Configure interactively:

Configure Server..

☐ Use existing configuration:

Configuration file:

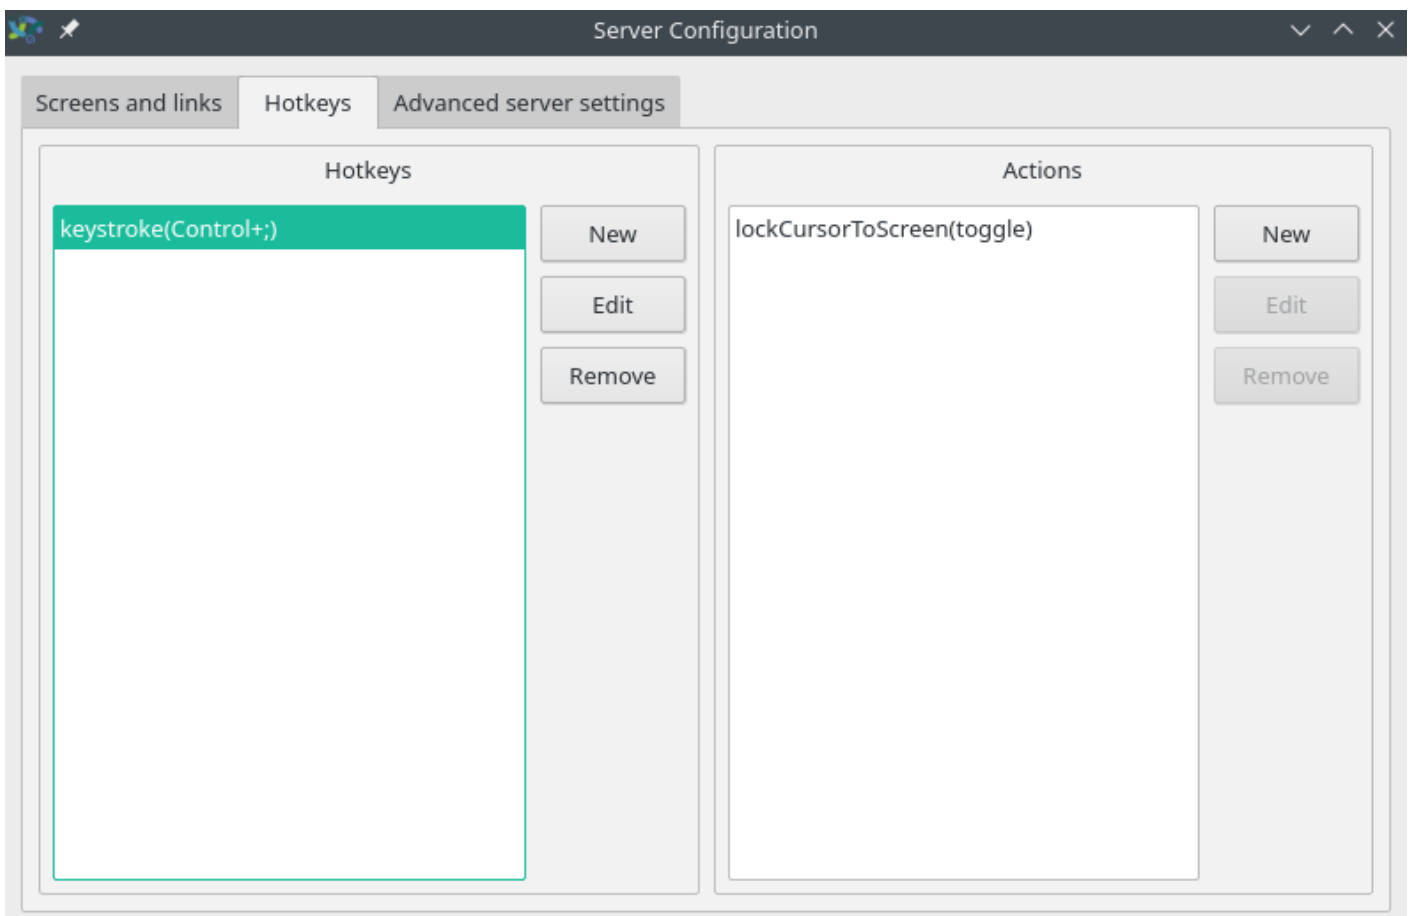

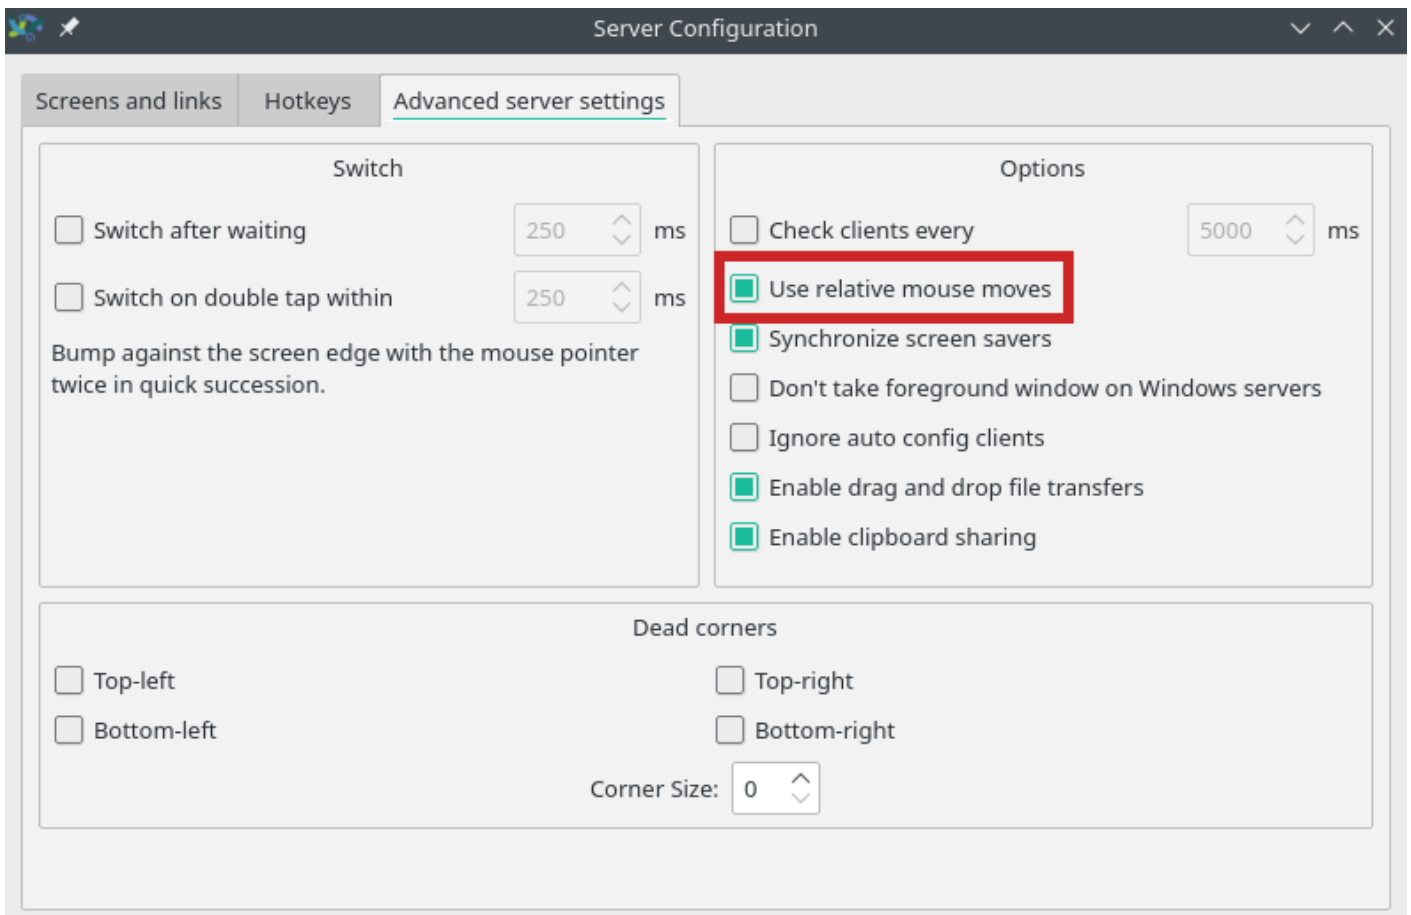

☐ Client (use another computer's mouse and keyboard):

Screen name:

Server IP:

☐ Auto config

 Barrier is running.
