

Common issues

Mouse uncontrollably spins in games

This usually happens in games and no matter what you change you can't play.

The solution is to tick the "Use relative mouse moves" in the server advanced settings and add a hotkey where you "Lock cursor to screen". You can set it to toggle, so if you want to come out of the remote machine's screen, you can just hit the same hotkey.

The image shows the Barrier application window. The title bar is dark grey with the Barrier logo on the left and window controls on the right. The menu bar contains "Barrier" and "Help". The main content area is divided into two sections. The top section is titled "Server (share this computer's mouse and keyboard):" and contains fields for "IP addresses:" and "SSL Fingerprint:". Below these are two radio buttons: "Configure interactively:" (which is selected) and "Use existing configuration:". Under "Configure interactively:", there is a green button labeled "Configure Server..." which is highlighted with a red rectangular border. Under "Use existing configuration:", there is a "Configuration file:" label followed by a text input field and a "Browse..." button. The bottom section is titled "Client (use another computer's mouse and keyboard):" and contains fields for "Screen name:" and "Server IP:". Below these is an "Auto config" checkbox. At the bottom of the window, there is a status bar that says "Barrier is running." with a lock icon on the left and "Reload" and "Stop" buttons on the right.

Barrier Help

☒ Server (share this computer's mouse and keyboard):

IP addresses:

SSL Fingerprint:

☒ Configure interactively:

Configure Server..

☐ Use existing configuration:

Configuration file:

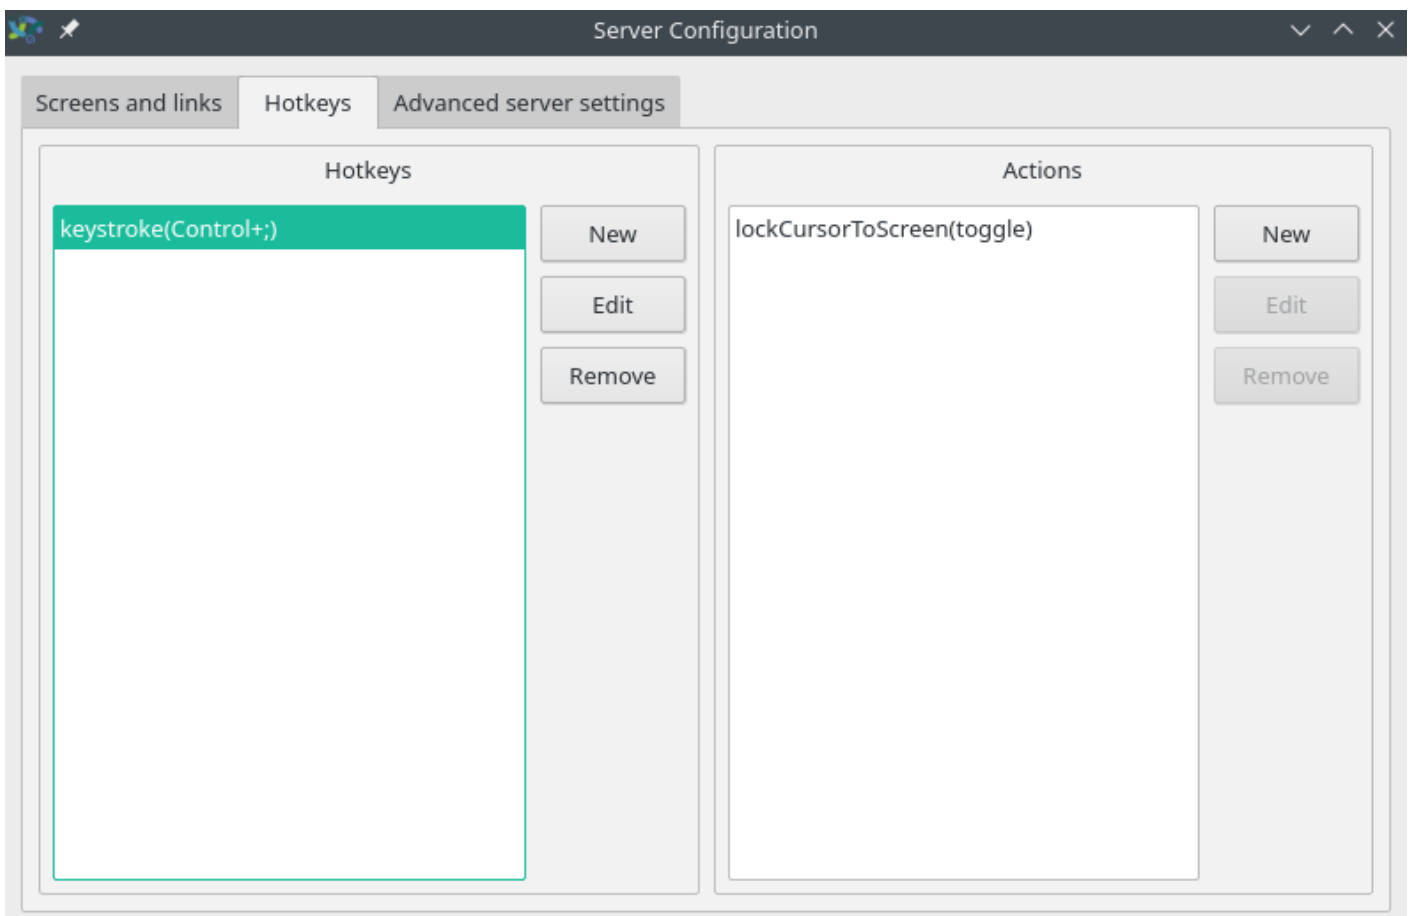

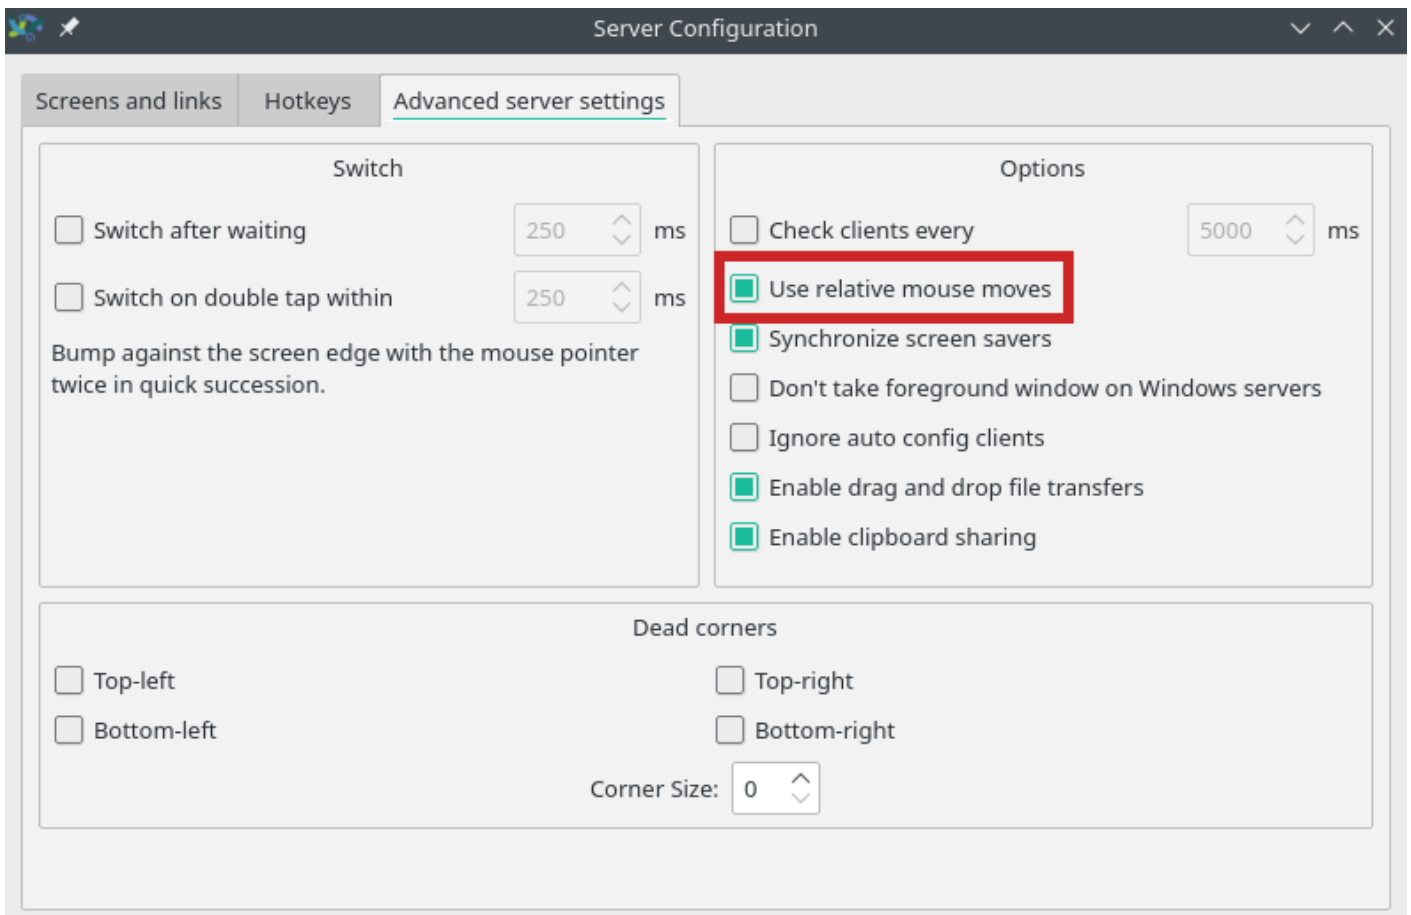

☐ Client (use another computer's mouse and keyboard):

Screen name:

Server IP:

☐ Auto config

 Barrier is running.
